Steps To Select A Device

- Research systems that will detect YOUR type of seizures
- Define the features you seek from a device
- Determine ease of use including setup
- Discuss options with your family and healthcare team
- Determine the cost of the Device

How To Apply For Danny Did Funding

- Visit Dannydid.org to review device options
- Contact the device manufacturer with any questions
- Email info@dannydid.org to request your grant application

All content in this publication is for informational purposes only. Do not make changes in medication, lifestyle, or seizure management without consulting your physician. No device system has been proven to prevent Sudden Unexpected Death in Epilepsy (SUDEP). The goal of Danny Did is to educate patients and their families about technology options that may complement their epilepsy treatment plan. We do not manufacture or sell any products, nor do we endorse one system over another.

Danny Did has provided device grants for families in all 50 states.
Epilepsy and SUDEP

- Epilepsy can impact people of all ages, and is defined by the occurrence of two or more unprovoked seizures.
- 1 in 26 Americans will develop epilepsy. While most people with epilepsy live long and productive lives, sudden death is among the risks that can accompany seizures.
- Thousands of deaths occur annually from SUDEP, a fact that is little known by the public, and rarely disclosed by medical professionals. We encourage you to discuss all risks with your healthcare team.

“We wish we had been aware of seizure alert devices for Danny. To honor his life, we provide this grant program and help families access a device for their loved one. Everyone deserves the chance to protect their child.”
